

Zard Progress Bar API

<z-progress-bar> Component

The `z-progress-bar` component is a flexible and customizable progress bar that allows full styling control using class-variance-authority (CVA). It provides several configuration options for size, shape, type, and more.

Usage

```
<z-progress-bar [progress]="50" [zType]="'accent'" [zSize]="'lg'"
[zShape]="'circle'" />
```

Properties

Property	Description	Type	Default
[progress]	Progress percentage (0-100).	number	0
[zType]	Defines the color variant.	'default' \ 'destructive' \ 'accent'	'default'
[zSize]	Sets the height of the bar.	'default' \ 'sm' \ 'lg'	'default'
[zShape]	Defines the border radius style.	'default' \ 'circle' \ 'square'	'default'
[zFull]	Makes the container take full width.	boolean	false
[class]	Custom classes for the container.	string	''
[barClass]	Custom classes for the progress bar.	string	''

Styling

The component supports full customization via CSS utility classes and CVA variants. Users can pass additional styles using `[class]` for the container and `[barClass]` for the progress bar.

```
<z-progress-bar [progress]="75" [class]="'border border-gray-500'"
[barClass]="'shadow-lg bg-green-500'" />
```
